

Name: Vanshika Jain

Roll No. 40

Batch T12

Experiment No-5

Aim: Experiment 5: To Build the pipeline of jobs using Maven / Gradle / Ant in Jenkins, create a pipeline script to Test and deploy an application over the tomcat server

Programming in Jenkins:

Continuous Integration is a software development practice where members of a team integrate their work frequently, usually each person integrates at least daily leading to multiple integrations per day. Each integration is verified by an automated build (including test) to detect integration errors as quickly as possible.” In simple way, Continuous integration (CI) is the practice of frequently building and testing each change done to your code automatically.

Jenkins is a self-contained, open-source automation server which can be used to automate all sorts of tasks related to building, testing, and delivering or deploying software.

Our first job will execute the shell commands. The freestyle project provides enough options and features to build the complex jobs that you will need in your projects.

Example 1

Example 1.1: Deploying a freestyle app in Jenkins

Creating a job:

Start building your software project

Create a job

Naming the job and setting it as freestyle:

Example 3

Example 3.1: Parameterise build Creating

a new freestyle project:

Enabling parameterisation and adding a String parameter:

Configuring the string parameter as Fname:

A screenshot of a configuration form for a 'String Parameter'. The form has a title bar 'String Parameter' with a menu icon and a close button. It contains three main input fields: 'Name' with the value 'Fname', 'Default Value' (empty), and 'Description' (empty). Below these fields, there is a 'Plain text' label and a 'Preview' link. At the bottom, there is a checkbox labeled 'Trim the string' which is unchecked.

Adding a choice parameter and configuring it as City with the following choices:

Choice Parameter

Name

City

Choices

Ambernath

Badlapur

Kalyan

Dombivli

ⓘ Requires Choices.

Description

Configuring build steps:

Build Steps

Execute Windows batch command ?

Command

See [the list of available environment variables](#)

C:\Admin\Academics\TSEC\Start3\SEPM\example3.cmd %Fname% %City%

Advanced ▾

Add build step ▾

Entering parameters for build:

Project Example3

This build requires parameters:

Fname

Siddhant

City

Bandra ▾

▶ Build

Cancel

C:\ProgramData\Jenkins\jenkins\workspace\Example3>C:\Admin\Academics\TSEC\Start3\SEPM\example3.cmd Siddhant Bandra

Hello your name is Siddhant and your city is Bandra

Finished: SUCCESS

Example 5

```
example5.py
File Edit View

import sys
num = int(sys.argv[1])

print(f"Original number is {num}")
print(f"Binary representation of {num} is {bin(num)}")
print(f"Octal representation of {num} is {oct(num)}")
print(f"Hexadecimal representation of {num} is {hex(num)}")
print(f"Complex representation of {num} is {complex(num)}")

Ln 9, Col 60 299 characters 100% Windows (CRLF) UTF-8
```

Example 5.1: Running a Python program Creating

a simple Python script:

Running the Python script on the terminal:

```
C:\Users\richminds\Desktop\sepm>python 24.py 10
Number is 10

C:\Users\richminds\Desktop\sepm>
```

Creating a new freestyle project:

Enter an item name

» Required field

Freestyle project

Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.

Pipeline

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

Multibranch Pipeline

Creates a set of Pipeline projects according to detected branches in one SCM repository.

Organization Folder

Creates a set of multibranch project subfolders by scanning for repositories.

If you want to create a new item from other existing, you can use this option:

OK

Parameterising the project with a string parameter as follows:

☒ This project is parameterized ?

String Parameter ?

Name ?

num

Default Value ?

Description ?

Plain text

Preview

☐ Trim the string ?

Add Parameter

Configuring the build steps:

Command

See the list of available environment variables

```
python C:\Users\richminds\Desktop\sepm\24.py
```

Setting the parameter for the build:

The screenshot shows the Jenkins web interface for configuring a build parameter. The top navigation bar includes a Jenkins logo, a 'Dashboard' link, and the project name '24_34_31_45_40_42_37_41'. The left sidebar contains a list of actions: Status, Changes, Workspace, Build with Parameters, Configure, Delete Project, and Rename. The main content area is titled 'Project 24_34_31_45_40_42_37_41' and displays the message 'This build requires parameters:'. Below this, a parameter named 'num' is shown with a value of '10'. A 'Cancel' button is visible. At the bottom, there is a 'Builds' section with a filter icon and a list of recent builds, all dated 'Today' at '10:37 AM'.

Builds
Filter
Today
#6 10:41 AM
#5 10:37 AM
#4 10:37 AM
#3 10:37 AM
#2 10:37 AM
#1 10:37 AM

Conclusion: Thus, we have successfully studied Continuous Integration and installed, configured, and understood programming with Jenkins.
